

PRODUCT INFORMATION

ATF TRANS4MER

The ever changing and increasing number of OEM fluid requirements for transmissions can complicate your inventory, cost you a bundle, and make it difficult to keep up with your customers' needs.

Wouldn't it be great if you could manage your inventory with ease, spend less, and make more money all while serving your customers with excellence?

BENEFITS

NGEN ATF Trans4mer™ is the answer. This product will allow you to modify your bulk (Dexron®/Mercon®) transmission fluid to meet OEM specifications for most highly friction modified applications, as well as Mercon® V. In addition, it protects against heat, oxidation, wear and friction. It eliminates chatter and shudder, conditions gaskets and seals, and stops leaks!

Inventory control, increased savings and profits, and customer satisfaction made easy!

*Note: Per the Magnuson-Moss Act, a warranty cannot be voided by using aftermarket products as long as they meet or exceed OEM recommendations and are properly applied. For a complimentary copy of the Magnuson-Moss Act for your shop, please contact us at 1.844.NGEN.PRO (643.6776).

DIRECTIONS

Add one (1) 10 oz. bottle of the ATF Trans4mer™ for up to 11 quart capacity. For capacities greater than 11 quarts, add one (1) additional ounce for each additional quart greater than 11 quarts. Always add modifiers to the vehicle, not the transmission fluid exchange machine's fluid tank.

*Will not void warranty when properly applied.

PART#	QUANTITY	SIZE
71083	12/CASE	10 oz.
