

## PRODUCT INFORMATION

# BLUE SHIELD™

## TREATMENT FOR OIL AND METAL

Motor oil is designed to lubricate the metal surfaces in an engine so all of the parts can move freely- reducing metal on metal wear caused by friction. Unfortunately during start up, the oil is typically all in the pan, not in the engine. This increases heat and friction, resulting in more wear and lost mileage.

## BENEFITS

Our unique, 2-in-1 formula is one of a kind and combines the benefits of an oil stabilizer that quiets noisy engines, stops smoking, reduces volatility burn-off and increases compression PLUS the protective, sacrificial barrier to prevent metal wear at start up and over miles of punishing driving.

*One Pour Does More!™*

## DIRECTIONS

Replace 16 oz. (1 pint) of regular oil with 1 bottle of Blue Shield™ 2-in-1 Treatment for Oil and Metal. Do not overfill. Not recommended during new car/engine break in. 1 bottle treats a 3 to 6 quart oil change. Use every 12 to 15 thousand miles.
