

PRODUCT INFORMATION

DOUBLE SHOT™ FUEL NHANCER™

Carbon is a normal by-product of the combustion process and tends to build up in the coolest parts of the chamber. Carbon soaks up fuel just like a charcoal briquette soaks up lighter fluid. The thicker the deposit the more fuel it steals, robbing a vehicle of power and performance.

Drivability issues like rough idling, decreased gas mileage, hesitation, failed emissions, and hard starting are just a few sources of expense, inconvenience, irritation, and safety concerns that can occur.

BENEFITS

NGEN Double Shot™ Fuel Nhancer™ is the answer to carbon, varnish, and gum deposits. This comprehensive two step service contains a superior package of detergents and solvents designed to remove those irritating and sometimes costly deposits. One step for the gas tank and one step for the intake system, properly applied (see vacuum source and application guide), is the ticket to removing deposits and maintaining a cleaner fuel system for peak performance!

*Not for use on diesel or rotary engines. Not recommended for use on Dodge Neons.

DIRECTIONS

Please refer to the application procedure guide.
