

## PRODUCT INFORMATION

# PREMIUM ATT

## AUTOMATIC TRANSMISSION TREATMENT

With service intervals increasing and people driving cars longer than ever before, the likelihood of neglect and excessive wear becomes greater. When wear and neglect occur in transmissions, friction increases and makes them run hotter and work harder. Shifting can also suffer and oxidation and acid build-up can attack the seals. Wouldn't it be great if we could protect this vital component better?

## BENEFITS

NGEN Premium ATT is here to help! Refresh! Renew! Revive! Our comprehensive formula fights friction, allowing your transmission to run cooler and last longer. It protects against oxidation, wear, neglect, and corrosion. Premium ATT can improve shifting as well as protect the internal seals.

*One pour does more!™*

## DIRECTIONS

Replace 12 ounces of ATF with the entire contents of 1 bottle of Premium ATT. Do not overfill. Do not use in CVT transmissions.
